ud ērdom āsmān abar sar: i.e. upon the head of Atlas.

pad dast i-š: ...; "and in his hand, for the establishing therefrom (*azīš*) of the zodiac, were placed therein 7 square pillars." *andar* seems redundant with *pad*. *dst* 'yš is a line-filling orthography for the usual *dstyš* (i.e. *dst* with suff. pro. 3 sg.) (H.).

ud awē wuzurg zamīg: the sixth earth was evidently placed on pillars, arches, walls, *and* on the shoulders of Atlas. The mention of two walls is perplexing; but in fact the reading of the word *'yw in the earlier sentence *prysp 'yw try xwr's'n 'yrg 'wd xwrnw'r* is not clear.

4 parisp i bēdom: presumably the containing wall around the fifth earth. The great *māzman* earth is the sixth, on which rest the seventh and the eighth (our own). The seventh seems ignored in what follows, the doors etc. being set in "it", i.e. in the eighth.

u-š dar, wisp nāy ud *kahriz ...: these are presumably connected with the Three Wheels. No verb is expressed for the relative clause. Probably, as often, the copula is to be understood. Lit. "and its doors, many pipes and channels, which (are) for raising up much air, water and fire thereby, ...". **qhryc* is restored by H.; the ms. has [wd] (*qh*)ryc.

frēstag ēahār: each of the 10 heavens was supported by four angels, one to each quarter. Our sky is here described as having its own four supporters, exactly like the upper heavens.

5 ud abgōhag i ēahār kišwar tār ...: "and for sweeping thereto (*awiš*) the dirt of the darkness of the four quarters, he prepared 12 hells, three to each region".

ahrewar nāfag: presumably the lowest point of the ocean, *under* the earth. The breathing of this sea-monster (on which see intro. p. 6) produces the tides.

[*a gap of unknown length*]

7 ud ka mihr yazzd ... kird ud wirāst: in this long temporal clause the creations of the Living Spirit are recapitulated. The main sentence begins with *ēg awē Mizdagħāz ud Azdegar Yazzd*. The identity of these gods is not known. Transl.: ::then the Messenger-(God) and the Herald-God, who [had been ...] over themselves by the Living Spirit and the female-shaped one who is the mother of the First Man, were placed there, in front of that god who stands above the sky, and holds the heads of those gods (i.e. of the Five Light Elements)". The god "who stands above the sky" is the Keeper of Splendour. On these lines see H., *BSOAS* XII 2, 1948, 317; the relevant passage from St. Augustine (*Contra Faustum* 15.5) is quoted in English translation by Jackson, op. cit., p. 300: 'For you say that (the Splenditenens) holds the heads of the elements and suspends the world'.

bannbed ... dahibed: the last 4 titles in this series are taken from the standard Zoroastrian classification of the leading men of 4 social groups. The first 2 have been added to bring the number to 6, to match the "6 sons" of the First Man.

8 u-t āz ud ahramen ... pad amā bast hēnd: "and by you Āz and Ahriman have been bound through us".

12 ...'wrwr, 'sprhm, 'wd mrw, 'wd "cyhr, 'wd gwnggwng 'rwy kyšt 'wd rwst. 'wš'n xwd "z xwyſ gryw 'ndr 'myxt.

9 ud xwar ud māh ... : “and he (i.e. the Third Messenger) shall assign to sun and moon time and revolution,” i.e. shall set them in motion, whereby the passage of time shall be marked. The meaning “revolution” for *pahrežišn* is assumed from this phrase *jár ud pahrežišn*, which occurs a number of times (see glossary).

10 rōšnšahr yazd ... **xradēšahr yazd**: the first is a regular term, in Pth. and Pe., for the Third Messenger. The second represents either Jesus, or possibly the Great Nous (see below, note on z 2). The name of the third god evoked is not given in what survives of the text.

a'ön hāniz rōšnšahr yazd ... : the text seems corrupt, for *xwd'wy* should mean “lordship”, *p'dyxš"y* “ruling, ruler”. H. accordingly conjectured that the ms. reading of the latter word must really have been *p'dyxš'ny*, see *BBB* pp. 95-96; but Sundermann, studying the original anew, is certain that the reading is in fact *p'dyxš"y*, see *KPT* p. 130 s.v. *p'dyxš'ny*. Probably, therefore, the hapax *xwd'wy* is to be amended to *xwd'y*: “so also that Rōšnšahr God shall be lord and ruler over earth and heaven”. For the last word in the paragraph, **qwn'd*, the ms. has *qwn'nd*.

11 After this sentence a ms. sheet is evidently missing, containing the account of the seduction of the Archons (see intro. p. 6).

13 hān-iš ... aziš būd : *hān* resumes *hān yek bahr*, and need not be translated. (This use of *hān* to resume a phrase or lengthy apodosis is frequent in Mani's writings.)
 Transl.: "That one portion ..., from it (-š ... az-iš) there came a monster".

14 hān yazd ēw taskirb : i.e. the Adamas of Light (see intro. p. 5), though why he has the epithet "four-shaped" is obscure. A.-H. quote the following parallel passage from M 292 V II: c'wn 'hwg 'w *nhcyrc'r, 'wš nb'st, sr pd xwr's'n, p'y pd xwrnw'r, my'n ch'r kwp'n, my'ng pd 'brg, rwy 'w 'yrg rwn, c'wn ſgr 'ndr q'ywd, hwy p'y pd wr 'wd grdn, dšn p'y pd ... (*Mir. Man. i*, p. 182 n. 2).

15 ud ēe'ōn hān awezmāhwar ud wirwar ... : *wirwar* is a hapax, apparently meaning "carrying the male". Transl.: "and like that lustful and phallogorphic (part) (i.e. the semen of the Archons), Az fell from the sky ... And she was together with (?) all kinds of plants and monsters of her own Self" i.e. of her own substance of Darkness, since they were devil-begotten. The reading *hmbwd*, also a hapax, has been supplied by Dr. Sundermann.

20 ud āb ādur pārāyād ... : "... and Water will purify Fire. And they (i.e. Wind, Water and Fire) will ever be together in one place and with one strength. And that original Light and *Goodness of their own, those Elements (i.e. Wind, Water and Fire) (have) in their protection. And the wish of the First Man, that has been fulfilled by them (-śān ... azīs)" (H.). This passage refers presumably to the Three Wheels.

22 rhngwh: this word is a hapax, of doubtful pronunciation. The identity of the Rahngūh (?) God is not known.

24 hān rošni ud abzawišn: i.e. the redeemed Light which, according to Mani, causes the waxing of the Moon; this is the especial care of the First Man, the lord of the New Paradise, who has his throne also in the moon. Transl.: "Then the First Man creates that light and increase of the moon in his own essence god, and arrays it." Cf. z 18, below.

awešān yazdān: i.e. the redeemed souls and particles of Light, by now "created god" by the First Man.

25 tār ud tam ... : four of the Dark Elements are listed here. The hendiadys *tār ud tam* is opposed to *rošn, hōsāg* to *wād, zahr* to *āb, sōziñ* to *ādur*.

26-34 These paragraphs (for which see also H. S. Nyberg, *Texte zum mazdayasnischen Kalender* (Uppsala 1934), 54-7, 76-79) are devoted to the year and changing seasons

On the cycle of the days

gwyšn 'yg phryzšn rwc'n

26 ... rwc pd h'n syh r'stw'n 'y 'wy dwdyg 'st'ng hnz'pt, 'yg "b'n m'h

as part of the process of physical redemption. H. has shown (*Henochbuch*, 32 f.) that the text was composed when the Persian New Year (on 1 Frawardin) coincided with the autumn equinox, i.e. during the reign of Ardašir I. It was therefore one of Mani's early works. The calendar of the original text is as follows :

1. Frawardin	Sept./Oct.	Scales (<i>m'zwg</i>)
2. Ardwahišt	Oct./Nov.	Scorpion (<i>gzdwm</i>)
3. Hordād	Nov./Dec.	Archer (<i>nym'sp</i>)
4. Tīr	Dec./Jan.	Goat (<i>whyg</i>)
5. Amurdād	Jan./Feb.	Water-carrier (<i>dwl</i>)
6. Šahrewar	Feb./March	Fishes (<i>m'hyg</i>)
7. Mihr	March/April	Ram (<i>wrg</i>)
8. Ābān	April/May	Bull (<i>g'w</i>)
9. Ādur	May/June	Twins (<i>dw phykr</i>)
10. Dai	June/July	Crab (<i>kyrzng</i>)
11. Wahman	July/Aug.	Lion (<i>šgr</i>)
12. Spendārmad	Aug./Sept.	Virgin (<i>hwšg</i>)

This text was revised by means of clumsy interpolations at a time when 1 Frawardin fell at the summer solstice, that is, sometime between about A.C. 590 and 660. Probably it was made after the schism of the Dēnāwars had separated the eastern church from the mother-church. The calendar at the time of the revision was the following :

1. Frawardin	June/July	7. Mihr	Dec./Jan.
2. Ardwahišt	July/Aug.	8. Ābān	Jan./Feb.
3. Hordād	Aug./Sept.	9. Ādur	Feb./March
4. Tīr	Sept./Oct.	10. Dai	March/April
5. Amurdād	Oct./Nov.	11. Wahman	April/May
6. Šahrewar	Nov./Dec.	12. Spendārmad	May/June

In this Reader those data which belong to the revised text have been set as parentheses.
26 hān sīh rāstwān i awē dudig āstānag : The *āstānag* or "thresholds" were evidently envisaged as 6 bands, dividing the space in the sky between the sun's greatest and smallest daily arc. The first "threshold" was the highest, the sixth the lowest. The sun was regarded as passing through one of these thresholds in each month of 30 days (*rāstwān*), and as going through each "threshold" twice in the year, ascending and descending. (For further details see H., *Mīr. Man. i*, 188 n. 3). When the second "threshold" was being traversed by the ascending sun, it was April/May, i.e. Ābān month by the original calendar. The data that in Ābān month the day had 11 hours, the night 13, belong to the revised calendar, according to which Ābān corresponds to January/February.

27 ud any sīh rōz ... kē māh ādur ... padiš pahrist: Transl. slightly doubtful. Perhaps: "And the further (lit. other) 30 days of the month Ādur are added (*passāxt ēstēnd*) through those same 30 *rāstwān* and 360 *wizihrag* which (are) in that same first "threshold" in which ... the month Ādur has existed (*pahrist*)."
Nyberg (loc. cit., p. 55) renders differently, i.e. "And the further 30 days of the month Ādur are protected (*pahrist*) (by it i.e. the sun) in the same 30 *rāstwān* and 360 *wizihrag* which are prepared (*passāxt ēstēnd*) in the same first "threshold", in which (is) the month Ādur". The ambiguity of *pahrist*, and the gap in the final relative sentence after 'dwr (ignored by Nyberg), contribute to uncertainty.

tīrēst ud šast wizihrag: H. points out (*Henochbuch*, 33 n. 4) that the "double hour" (weyhrig), dividing the day, like the year, into 12, is a Babylonian reckoning; and that it is curious to find it in the same text with *zamān*. The origin of the word *weyhrig* is obscure, and its pronunciation doubtful.

hān-iš ... māh ādur ... pahrēzēd: H. now renders, tentatively: "In that (i.e. the first "threshold") are (*pahrēzēd*) then the month Ādur ... and the zodiacal sign Gemini". Nyberg again takes *pahrēzēd* in the sense "protects", with the sun understood as the subject (see his discussion, op. cit., p. 78; at the time when he wrote, the sense of "be, exist" had not been established for *pahrēz-*). The -š suffixed to *hān* remains unexplained.

u-śān ... aziš: A.-H. render tentatively "and by them" (i.e. by the she-devils of heat). Nyberg translates "from those (days) on", which forces the meaning of *aziš*.

28 tīrēst ud šast wisānag: the reckoning *wisānag* = 10 seconds does not appear to be Babylonian. It is used also in a Manichaean Sogdian text (H., *Henochbuch*, 33 n. 4).

rōz dwāzdah zamān bawēd ...: this statement belongs to the calendar of the revised text, with the spring equinox falling in the month Ādur.

29 hambaxsēd ud paydāg kund: the subject is the Third Messenger.

30 ud ka xwarxšed ... : "And when the sun is on high in that breadth of the cosmos, in the highest of the skies, month by month corresponding to the zodiacal signs the Ram etc., then corresponding to these 5 signs, those 5 days increase in the 5 months, for each sign and month one day".

*axtar axtar **ud māh māh** : the ms. has only one 'xtr, probably by a copyist's mistake.

panz gāh : the Zoroastrian calendar had consisted of 12 months of 30 days each, but at the beginning of the Sasanian period this was modified by the addition of 5 extra days, set after the 12th month and called officially the *Gāh* (< *Gāthā*) days, on which see in more detail Boyce, 'On the calendar of Zoroastrian feasts', *BSOAS* XXXIII, 1970, 513-39. The explanation offered here for the existence of these 5 days is evidently prompted by the observation that the time of the sun's course across the sky is longer in spring and summer than in winter and autumn (see further H., *Mir. Man. i*, 190 n. 1).

By An-Ērān Mani probably meant Babylon and its neighbours. According to the present account, there were 12 more days in the An-Ērān year than in the Ērānian one, i.e. 10 extra days corresponding to the 5 *Gāthā* days, and 2 more for the zodiacal signs Virgo and Pisces. In fact there were only 354 days in the Babylonian lunar year, a difference of 11 days from the Ērānian year. 5 and 12 were however holy numbers for the Manichaeans; and Mani appears to have increased the difference between the two reckonings from 11 to 12, in order to have a true Manichaeian correlation of 5 extra days in Ērān to 12 abroad (H., *Henochbuch*, 34-35).

31 ud hassār-iz höšag axtar ... : "And likewise, (with) the sign Virgo there is increase of one day in one month, that which (is) when thereby (? -šān ... azīš) cold begins spreading (lit. opening) downwards ...". The plural -šān is perplexing, and in the light of the parallel passage in 32 (*ka ... garmāg azīš* "when thereby heat ...") should probably be deleted as a scribal error.

33 ég hān panz rōz ... : the main verb is not expressed, nor the second subsidiary verb. "Then those (are) the 5 days which are now reckoned in Ērān the *Gāh*, and the 12 days which (are intercalated) in other countries". The force of *nūn* "now" is that the 5 days had been added to the Iranian calendar during Mani's own lifetime.

[*a gap of unknown length*]

35 ... **ahramen ud dēwān**: because of the missing words, the meaning of this sentence is not wholly clear. The whole paragraph is prophetic.

36 **ud naxust-iz** ... : "and in the beginning also, when regions, places and boundaries had been allotted by these gods (i.e. by the Living Spirit and his helpers), according to the time and revolution and increase and diminution of sun and moon ...".

ēg hān ... āz ... : "then that Āz with smitten offspring, which fell down from the sky, and was clothed in trees and plants, and through the trees and plants was clothed in these abortions of the mazans and āsrēstārs which fell down from the sky ...". (Āz was both in the abortions themselves, and also passed into them from the trees and plants which they ate.) The main sentence to which this forms the protasis is lost.

u-š dudu ... nišid : the š refers to Āz.

u-š o rahān pahrézēnd : "and they protect it (on the way) to the chariots".

37 **āz grān xēšm pahikand** : Āz is presumably the indirect obj., *pahikand* impersonal. Lit. "To Āz it was filled with great anger".

hān dō dēs ... i narisah yazd : i.e. of the Third Messenger himself and his evocation, the Maiden of Light.
